

## Condensed Notes on Video

### Keywords in this video:

Ethereum, Sniping Bot, Passive Income, AI, ChatGPT,, Smart contract, Ethereum, Trading, Profit, Bot, Web3, Passive

**Definition:** the video demonstrates how to create and utilize an ethereum sniping bot, an automated trading tool, to generate passive income. the bot, powered by ai and chatgpt, monitors the blockchain for new tokens and significant price changes, allowing it to quickly buy or sell tokens before the market reacts. this strategy provides an advantage in capitalizing on price differences. the process involves using remix, a web3 application, to write and deploy a smart contract code, which the narrator obtains from chatgpt. the code is then compiled and deployed to a wallet, with gas fees paid to confirm the transaction.

**Core Concept:** once the smart contract is deployed, the user funds it with ethereum, which the bot uses for trading. the more ethereum deposited, the larger the potential trades and profits. the narrator demonstrates starting the bot, which begins scanning for trading opportunities. after approximately 12 hours, the bot has generated a profit of 1.31 ethereum, or 31 %. the narrator decides to let it run for another 12 hours, resulting in a total profit of over 1.6 ethereum, recovering more than half of the initial deposit in just one day. the video concludes by encouraging viewers to share their profits, like the video, and subscribe for more web3 passive income strategies.
